DETAILED ACTION

1. The following is an examiner's statement of reasons for allowance:

The invention relates to an improved method of producing wood particle board wherein premature reaction of functional groups is largely prevented and the emission of pollutants such as formaldehyde is avoided by the improved process. The improved process utilizes a two-component binding system in which a first binder component is admixed with wood particles during an early phase of the process and a second binder component which is reactive with the first binder is added at a subsequent lower temperature thus providing an improved wood particle board which does not suffer from the problems of the prior art processes.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Wierer teaches a method of making wood particle using two component binder system but the binders are not added sequentially as claimed in the instant application.
3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stephen J. Lechert Jr. whose telephone number is 703-305-6156. The examiner can normally be reached on 9:30-6:00.
